## Part 2. Solving Equations

A. The density of a substance is defined by it's mass divided by it's volume. The equation has the following form:

$$D = M / V$$

where D is density in gm/cm<sup>3</sup>, M = mass in grams, and V is volume in cm<sup>3</sup>

1. You measure the mass of a substance as 2356 gm. It's volume is 534 cm<sup>3</sup>, calculate it's density in gm/cm<sup>3</sup>. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$D = \frac{2356 \text{ gm}}{534 \text{ cm}^3} = 4.4 \frac{\text{gm}}{\text{cm}^3}$$

2. The density of a substance is 9.8 gm/cm<sup>3</sup>. If you had a volume of 3.8 cm<sup>3</sup> of the substance, what would be the corresponding mass in grams? Hint: Rearrange the density equation to solve for mass. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$V \times D = \frac{M}{V} \times V \quad m = VD = (3.8 \text{ cm}^3) \left( 9.8 \frac{\text{gm}}{\text{cm}^3} \right) = 37.2 \text{ gm}$$

3. The density of a substance is 2.5 gm/cm<sup>3</sup> and you possess 15.3 grams of that material. What will be it's corresponding volume in cm<sup>3</sup>. Hint: Rearrange the density equation to solve for mass. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$\frac{1}{D} \times V \left( D = \frac{M}{V} \right) \times V \times \frac{1}{D} \Rightarrow V = \frac{M}{D} = \frac{15.3 \text{ g}}{2.5 \text{ g/cm}^3} = 6.1 \text{ cm}^3$$

B. The velocity of moving objects (for example your car while driving) is measure as a rate of motion, according to the following equation:

$$V = d / t$$

where V is velocity (m/sec), d is distance (m), and t is time (sec).

4. You drive your car between two cities that are 123 miles apart. It takes you 4 hours to get there. Calculate your average velocity in mi/hr. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$V = \frac{d}{t} = \frac{123 \text{ mi}}{4 \text{ hr}} = 30.75 \frac{\text{mi}}{\text{hr}}$$

5. Using the velocity you caculated in 4 above, what was your velocity in m/sec? Hint: you will have to use a distance and time conversion factor. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$\left( 30.75 \frac{\text{mi}}{\text{hr}} \right) \left( \frac{5280 \text{ ft}}{1 \text{ mi}} \right) \left( \frac{1 \text{ m}}{3.3 \text{ ft}} \right) \left( \frac{1 \text{ hr}}{3600 \text{ s}} \right) = 13.7 \frac{\text{m}}{\text{s}}$$

6. You are driving a car at a velocity of 10 m/sec for a distance of 12 km. How long did it take you to get there? Answer in hours. SHOW THE FORMULA AND ALL OF YOUR MATH WORK!

$$v = \frac{d}{t}$$

$$t = \frac{d}{v}$$

$$t = \frac{d}{v} \Rightarrow t = \frac{d}{v}$$

$$(12 \text{ km}) \left( \frac{1000 \text{ m}}{1 \text{ km}} \right) = 12000 \text{ m}$$

$$1200 \left( \frac{1 \text{ hr}}{3600 \text{ s}} \right) = 0.33 \text{ hr}$$

$$2 \quad t = \frac{d}{v} = \frac{12000 \text{ m}}{10 \frac{\text{m}}{\text{s}}} = 1200 \text{ s}$$
