

In-Class Exercise - Creating Contour Maps
G476/576 Hydrology

An isohyet map is a contour map of precipitation data for a given area or region. Attached are point data for Mean Annual Precipitation for the State of Oregon (in inches). Using an isohyet interval of 10 in/yr (isohyets connect points of equal annual precipitation), contour the precipitation data.

Using colored pencils, color code your contour map (when it is finished) using the classification scheme listed on the legend.

Activity 2: Classified Precipitation Map of Oregon

Generalized Average Annual Precipitation (inches/year)
