

Instructions for Adding the Projection Utility Extension to the Student Virtual Campus Version of ArcView 3.2

- (1) Install the student Virtual Campus version of ArcView 3.2 on your local computer
 - (2) Download projutil.zip from the G492 GIS Applications Home Page (save to temp directory)
 - (3) Unzip projutil.zip using Winzip, extract the two archived files (projutil.exe and projutil.avx) in the same temp directory as in step 1 above.
 - (4) Copy projutil.exe to the VCampus\ARCVIEW\BIN32 folder.
 - (5) Copy projutil.avx to the VCampus\ARCVIEW\EXT32 folder.

The ArcView projection extension should now be available from the File-Extensions menu, check the extension, then go to File-Projection Utility and start working! Have fun.
