Monday Moodle Tips

How to embed videos

Linking and embedding videos are good ways to share videos with students----it helps slowing down the growth of database size, and it makes the course rollover process much easier for you because you don't have large course files to deal with. Today's tip is to show you how to embed videos.

1. Open the Moodle course
2. Select "Turn editing on" (top right corner)
3. Go to the activity that the video will be added to and select "Edit" and "Edit Settings"
4. Click on the "Toolbar Toggle" button to expand the toolbar
5. Select the "HTML" button [<>] in the toolbar
6. In the "HTML" text box copy and paste the video's HTML code (or called embed code)
7. Select the "HTML" button again to switch back to layout view
8. The video will now be displayed
9. When finished select "save and return to course" or "save and display"
